

## Online Systems Lab 3 – Function Keys and Menu Transfer

The purpose of this lab is to add function keys as required to your programs, and to add the required code to allow for transfer from Menu to Inquiry.

After this lab will be the first peer testing.

Add Function Keys as described in class and in the notes on DC Connect. At this point the only working function keys need to be:

- F1 (or entering 1 into the Choice field) to transfer from Menu to Entry
- A function key of your choice (perhaps F9) or entering a '9' to exit from the Menu
- A function key of your choice to exit Inquiry

As mentioned in class remember that you may not use F5 due to restrictions on our system.

Of course, if you have other places you choose to add Function keys you are welcome to do so.

Add the needed XCTL logic in the Menu program to transfer from Menu to Inquiry. Note that at the moment there is no transfer back from the other programs to Menu.

Due Date: Wednesday, October 10<sup>th</sup>. Submit the updated version of XXPRGM.
