

Reading from a CICS file

```
MOVE STUNUMI TO STUFILE-STUDENT-NO.  <- move the key from the screen to the record
                                       layout key field

EXEC CICS READ FILE('STUFILE')        <- issue the read
      INTO (STUFILE-RECORD)           <- INTO just like in cobol, name of the 01 in WS
      LENGTH (STUFILE-LENGTH)         <- length of the record, like Record Contains, must be an 01
      RIDFLD (STUFILE-KEY)            <- name of the key field, including the prefix
END-EXEC.

MOVE LOW-VALUES TO MAP20.              <- blank out the existing map output

MOVE  STUFILE-STUDENT-NO  TO STUNUMO.    <- move fields from the WS record layout to the
                                       corresponding output field on the map
MOVE  STUFILE-NAME        TO STUNAMO.    <- Lots move moves, one per field...
```
